Project Title: Job Application Tracking System for Students

Course: Mini Project

Student Name & Roll No: Sudharsan S & 25BCS156

Department: Computer Science

Mentor / Guide: Mr.Aravind

The Job Application Tracking System for Students is a Java-based console application designed to help students manage and track their job applications efficiently. Many students apply to multiple companies and find it difficult to remember application details and statuses. This system provides a simple way to store, update, and view job application records such as company name, role, and status. It helps students stay organized and monitor their job search process.

JAVA PROGRAMMING PROJECT PRESENTATION

OBJECTIVE

- To design a job application tracking system
- To store job application details
- To track application status
- To update application information
- To search applications easily
- To provide a simple console-based interface

PROBLEM STATEMENT

Students face problems like:

Forgetting application details

- Difficulty tracking multiple applications
- No proper record maintenance
- Confusion in status updates

No proper system to:

Track status (Applied/Interview/Selected)

- Search company applications
- Store application data
- This project solves these problems using automation.
-

SYSTEM REQUIREMENTS

Hardware Requirements:

- Processor: Intel i3 or higher
- RAM: 4GB minimum
- Storage: 500MB

Software Requirements:

- OS: Windows / Linux
- Language: Java
- IDE: Eclipse / IntelliJ / NetBeans

SYSTEM DESIGN

The system consists of:

Application Input

Data Storage

Status Update

Search Function

Workflow:

User selects option

Enters application details

System stores data

User views or updates records

Search applications by company

MODULE DESCRIPTION

Input Module

Collects ID, company name, role, and status

Storage Module

Stores data using ArrayList

Display Module

Shows all applications

Update Module

Updates application status

Delete Module

Removes application records

Search Module

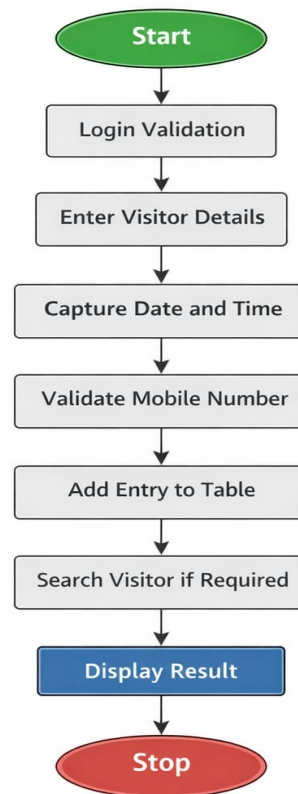

Searches applications by company

JAVA PROGRAMMING PROJECT PRESENTATION

ALGORITHM / FLOWCHART

- 1) Start
- 2) Display menu options
- 3) Select operation
- 4) Add / View / Update / Delete / Search
- 5) Process user input
- 6) Store or modify data
- 7) Repeat until exit
- 8) Stop

FLOWCHART

JAVA PROGRAMMING PROJECT PRESENTATION

IMPLEMENTATION

Technologies used:

Java Programming

Collections (ArrayList)

OOP Concepts

Features implemented:

Add application

View applications

Update status

Delete application

Search by company

JAVA PROGRAMMING PROJECT PRESENTATION

OUTPUT SCREENS

```
===== Job Application Tracker =====
```

1. Add Application
2. View Applications
3. Update Status
4. Delete Application
5. Search by Company
6. Exit

```
Enter your choice: |
```

```
===== Job Application Tracker =====
```

1. Add Application
2. View Applications
3. Update Status
4. Delete Application
5. Search by Company
6. Exit

```
Enter your choice: 1
```

```
Enter ID: 101
```

```
Enter Company Name: TCS
```

```
Enter Role: Software Engineer
```

```
Enter Status: Applied
```

```
Enter your choice: 2
```

```
--- All Applications ---
```

```
ID: 101, Company: TCS, Role: Software Engineer, Status: Applied
```

RESULTS & DISCUSSION

Successfully created job tracking system.

Users can:

Store application details

Track status

Search and update records

Challenges faced:

Managing data using collections

Handling user input

System helps students organize job applications.

JAVA PROGRAMMING PROJECT PRESENTATION

CONCLUSION & FUTURE ENHANCEMENT

Conclusion:

Project meets objectives

Improves data management skills

Simple and effective system

Future Enhancements:

Add GUI interface

Add database (MySQL)

Add reminders/notifications

Export reports
